

BUILDING A CONTRACT REPOSITORY AND INTAKE PROCESS

Situation

A large media company needed a single contract repository and an automated contract intake process to streamline requests between various business owners, IT and legal.

Solution

Morae Global implemented a user-friendly intake and triage process for automated contract intake and reporting. The contract repository was configured to ensure key contract provisions and metadata were search-enabled and contract data could be easily exported to a dashboard for ongoing reporting. Morae Global trained users in multiple locations and continues to provide post-implementation support.

Benefits

The simplicity of the user interface design, together with a streamlined process for intake, triage and reporting, enhanced the user experience and helped drive broad adoption.
